

MOLEBUSTER™

INSTRUCTIONS

You have purchased the mole trap used by the professionals. Here is their secret first and foremost rule: For the results you expect the **MOLEBUSTER™** must be in total darkness. **Absolutely no light may be allowed into the tunnels!**

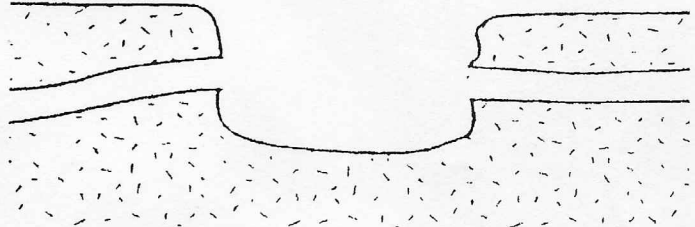

STEP ONE:

Find the latest sign where the mole was active. Level off excess dirt, dig hole approximately 12" diameter and 10" deep.

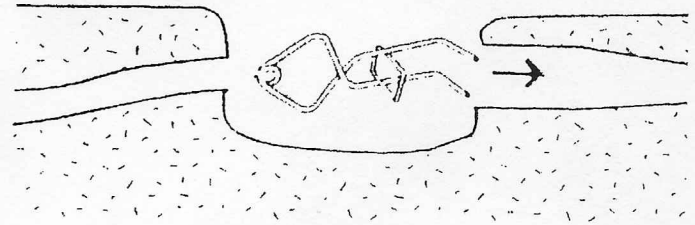

STEP TWO:

Find all the tunnels in the wall of the hole, with gloved fingers or the **MOLEBUSTER™**. Then use the **MOLEBUSTER™** to clean out the tunnels.

STEP THREE:

Enlarge tunnels to fit the **MOLEBUSTER™** in the "set" position as shown in the illustration.

STEP FOUR:

Set a **MOLEBUSTER™** in every tunnel found. Cover the entrance with clumps of dirt and fill the hole. Check after two days. If mole has not yet been trapped repeat the procedure.
